

Seavus Project Viewer

The complete viewer for *Microsoft® Project* files

Customers in the Technology Industry

Technology

The cornerstone of successful technology companies is prudent investments in future products and services. These dollars need to be invested wisely in research, designing and prototyping products. Winners need to be identified early in the project life cycle and losers need to be culled quickly. Monitoring all on-going projects requires continual supervision and constant communication with project leaders and team members. **Seavus Project Viewer** cost effectively helps team leaders and managers see what is actually happening to all projects within their company.
